

PEOPLE ARE THE NETWORK

# Verum Messenger

**Anonymous. Secured.  
Independent.**

# Problem 2026

## Key threats in 2026

In 2026, the communication landscape faces threats undermining user control and privacy, including data collection and centralized servers. Big Tech and government surveillance exacerbate these issues, reducing user autonomy. Ultimately, external forces often dictate communication terms, challenging true ownership.

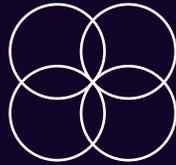

# Who We Are

## Five years focused on privacy

Verum, launched in 2021, celebrates its fifth anniversary in 2026 with Offline Mode. Supporting iOS and Android, registration requires only a nickname and password, reflecting zero data collection and user privacy. This underscores Verum's dedication to protecting user information.

## Slogan

The tagline "The messenger that knows nothing about you" highlights the platform's commitment to user anonymity and minimal data retention. By ensuring personal information is neither collected nor stored, the service provides a secure communication experience, emphasizing user trust and privacy protection.

# Privacy by Default

## Platform privacy protections

Verum enforces privacy by default across the platform with end-to-end encryption everywhere and keys stored only on devices, ensuring developers have no access to message content. The app notifies users about screenshots, recordings, copying, and forwarding to prevent unnoticed data leaks, and supports biometric unlocking and passcodes for device-level protection. Additional privacy features include local AI processing and offline translations, keeping sensitive data on the users device rather than in the cloud.

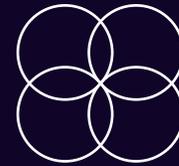

# Key Features

## Key features

Verum Messenger offers text/voice messaging, self-destructing messages, and HD E2E audio/video for private communication. It supports groups up to 10,000, media editing, themes, and offline translation for 30+ languages, providing a comprehensive messaging experience without compromising privacy or performance.

## Advanced Security Measures

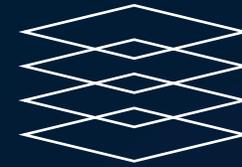

Verum Messenger combines advanced security with biometric authentication and AI threat detection to protect user data. It features customizable privacy settings, letting users control who sees their status and profile, ensuring a secure, personalized messaging experience.

# February 2026 Revolution

## Offline Mode overview

Offline Mode's "People as the Network" concept uses decentralized system for networking. It ensures end-to-end encryption without internet or servers, enabling secure communication when infrastructure is unavailable.

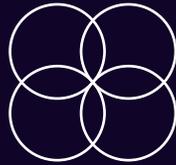

# Integrated Ecosystem

## Ecosystem overview

Verum consolidates essential services into a single app to reduce the attack surface and simplify user experience. It includes Verum AI for on-device intelligence, Verum Mail for secure email, a VPN for online privacy, and Verum eSIM with coverage in over 150 countries. This integration provides a wide range of tools while maintaining high security.

## Thesis

Having fewer apps installed reduces potential vulnerabilities, leading to a robust privacy posture. By minimizing applications, users lower security breach risks and maintain an efficient digital environment that prioritizes privacy and data protection.

# Future Features
